Weekly Coal Production

Production for Week Ended:
March 6, 1993

Summary

U.S. coal production in the week ended March 6, 1993, as estimated by the Energy Information Administration from railroad car loadings, totaled 18 million short tons. This was about the same as in the previous week, and 5 percent lower than in the comparable week in 1992.

Production east of the Mississippi River totaled 10 million short tons, and production west of the Mississippi River totaled 8 million short tons.

On March 4, 1993, the United Mine Workers of America (UMWA) miners returned to work, following the UMWA's announcement on March 2, 1993, that the coal strike was ended.
